Running Stacey Enterprises on Stacey POS

Stacey POS is the single system behind both of Stacey Enterprises' businesses. It records every sale, tracks stock, keeps the books straight, and shows leadership what's happening today — without needing two separate systems.

- Stacey Fountain — bottled & sachet water

- Stacey Farm — poultry & eggs

Getting Started

There's no public sign-up page — every account is created for you by an Owner or General Manager from the Staff Management screen, and it emails you your first login details.

Signing in

- Go to the login page and enter the **email** and **password** you were given.
- If you type the wrong password five times in a row, the account locks itself for **15 minutes** as a security measure — wait it out or ask an Owner/GM to reset your password.
- **First login:** you'll be dropped straight into a **Set a new password** screen. Enter the temporary password you were emailed, then choose your own (minimum 8 characters). You can't use the rest of the app until this is done.

Finding your way around

- **Left sidebar** — your menu. It only shows the pages your role can use, so two people can be looking at completely different sidebars on the same account type. Click the arrow at the bottom to collapse it to icons only.
- **Store switcher** (top right) — only visible to an Owner account that has access to more than one location. Use it to flip between Stacey Fountain and Stacey Farm; the page reloads with that store's data.
- **Bell icon** — reserved for upcoming alerts (low stock, equipment due for service, expenses waiting on approval). For now, check the relevant page directly rather than waiting on a notification.
- **Your name** (top right) — opens Profile Settings, Change Password, and Sign out.

Heads up: Stacey Fountain and Stacey Farm share the same screens, but several of them relabel themselves for the store you're in — for example, "Returns" becomes "Damaged / Broken Eggs" on the Farm side. This guide calls out every place that happens.

Roles & Permissions

Five roles do the real work day-to-day. What you see in your sidebar is what you have access to — there's nothing hidden behind extra clicks.

The roles

- **OWNER** Full access everywhere, plus the only role that can switch between store locations.
- **GENERAL MANAGER** Same day-to-day access as the Owner at their assigned store, minus the store switcher.
- **MANAGER / SUPERVISOR** Runs the floor: sales, stock movements, expenses, returns, attendance.
- **ACCOUNTANT** Focused on the numbers: sales, stock, expenses, attendance.
- **DRIVER** Field role: their own deliveries, customers, location reporting, and returns.

No self-service password reset. If you forget your password, there's no "forgot password" link — ask your Owner or General Manager to reset it from Staff Management. You'll be emailed a new temporary one and asked to set your own on next login.

Dashboard

Everyone — content adapts to your role

Your homepage after signing in. Owners, GMs, floor staff and drivers each get a different view built for what they actually need to check.

Owner / General Manager view

- Today's Sales, Total Stock, Profit, Loss, Total Expense, and Returns/Damaged Stock — filterable by **2 Days, 7 Days, 1 Week, 1 Month, or 1 Year**.
- **How is profit/loss calculated?** — an expandable panel that shows the full breakdown: revenue minus returns/write-offs minus cost of goods sold equals gross profit, minus approved expenses equals net profit or loss.
- **Low stock alert** banner listing any product at or below its threshold.
- Sales trend chart, a Best Selling Products chart, per-product Stock Health, and an Expenses by Category breakdown.

Manager / Supervisor / Accountant view

- Today's Sales, Total Stock, and Returns/Damaged Stock.
- A combined Sales/Stock trend chart.

Driver view

- My Customers, Products Sold (week/month/year).
- Distance Covered (week/month/year) and Returns.

Sales

Owner

GM

Manager/Supervisor

Accountant

Where every transaction gets recorded, from a single bottle of water to a bulk crate of eggs.

Recording a sale

- Pick a product — its current stock is shown right in the dropdown so you never oversell.
- Enter the quantity. The price fills in automatically from the product catalog.
- **Price is locked for everyone except the Owner/GM.** This keeps every discount or override on record — if a price looks wrong, it needs an Owner or GM to change it, right there on the sale.
- Add as many line items as the sale needs with + **Add Item**, choose a payment method (Cash, Bank Transfer, or Card), and confirm the total before submitting.
- Every sale lands in the **Recent Sales** table below, with who recorded it.

Products

Owner

GM

Your catalog: what you sell, how it's measured, and what it costs. Fountain and Farm use different units, so the form adjusts automatically to the store you're in.

Adding or editing a product

- Set a name, unit (Fountain: pack, bag, crate, bottle, unit · Farm: crate, bird), and — for birds — a category of layer or broiler.
- A **SKU is generated for you**; it's never typed in.
- Set a **Low Stock Threshold** — cross it and the product shows up in low-stock alerts on the Dashboard.
- **Cost Price** is optional but drives real profit/margin figures — leave at zero if unknown.

Changing a price later

- Selling price is **audit-locked**: once a product exists, its price can only be changed through the small **Edit** link next to the price in the table — never buried in the general edit form.
- Only Owner/GM can do this; everyone else sees a  next to the price.
- **Deactivate** retires a product without deleting its sales history.

Every other role sees the catalog read-only, with live stock, price, cost, and profit margin — useful for checking a price mid-conversation with a customer.

Inventory

Owner

GM

Accountant

Manager/Supervisor — view only

Three tabs cover everything from a quick stock check to fixing historical records.

Overview & Analytics

Total units in stock, how many products are healthy vs. running low, and a per-product table with a status badge:

-  **Healthy** — comfortably above threshold
-  **Low stock** — at or below threshold
-  **Out of stock** — zero units left

Stock In / Out

- Select a product, enter a quantity, and add a note (e.g. "delivery from supplier" or "spoiled batch").
- **Stock In** adds units; **Stock Out** removes them. Managers/Supervisors can view this tab but can't submit changes — ask an Owner, GM, or Accountant.

Manual Past-Sale Entry

- For backfilling sales that happened **before** Stacey POS was adopted, so historical numbers aren't lost.
- Pick the product, quantity, and the actual date it was sold; every entry stays visible in a log underneath for auditing.

Expenses

Owner

GM

Manager/Supervisor

Accountant

Every category is tailored to the store: Fountain covers things like Fuel, Caps, Bottle Preforms, Nylon, Filters, AEDC and Labels; Farm covers Layer Mash, Grower Mash, Feeds, Vaccination, Medication and Day-Old Chicks. Salaries, Maintenance and Misc are shared by both.

Recording an expense

- Choose a category, enter the amount and a short description, and submit.
- Each store has an approval threshold: expenses **under** that amount are approved automatically; anything over goes in as **Pending**.
- Only an **Owner or GM** can approve a pending expense — an "Approve" link appears next to it once they're viewing the list.
- Filter the list by All / Pending / Approved to see what's still waiting on sign-off.

Returns & Damaged Stock

Owner

GM

Manager/Supervisor

Driver

This is the one screen that changes its entire purpose depending on where you are — because a returned water bottle and a broken egg need to be handled completely differently.

Fountain

Returns

- Record a product, quantity, and reason.
- The stock is **added back** to inventory automatically.
- Every return is listed with date, quantity, and who recorded it.

Farm

Damaged / Broken Eggs

- Record what happened — broken, cracked, rotten, contaminated, transport damage, or other.
- This stock is **written off**, not restocked, and valued at cost price.
- The page totals up how many incidents were recorded and the estimated ₦ loss.

Customers

Owner

GM

Driver

Fountain customers are managed for loyalty and repeat sales; Farm customers are managed around a delivery calendar.

Fountain

Directory & rewards

- Tracks each customer's lifetime sachet bags and bottles, a running **token** balance, and free packs earned through the loyalty program.
- Drivers can add new customers, record a delivery/purchase on the spot, and **redeem** a customer's tokens.

Farm

Supply Schedule

- Set a delivery frequency (daily, weekly, every 2 weeks, or monthly) and quantity per customer.
- Customers sort themselves into three lists: **Overdue**, **Due Today**, and **Upcoming** — so nobody has to remember it from memory.
- Click **Mark Supplied** once a delivery is done and the next date updates automatically.
- A separate **Customer Directory** tab holds the plain contact list.

Driver Tracking

Owner

GM

Driver

Fountain only

Farm operations don't run delivery drivers, so this page isn't part of that side of the business — visiting it there sends you back to the Dashboard.

Driver's own view

- **Send Location Update** shares a one-off GPS ping; **Start Auto-Tracking** sends one automatically every 60 seconds while it's on.
- List today's delivery stops as plain typed addresses under **Targeted Delivery Locations** — no coordinates needed.

Owner / GM view

- A live table of every driver: their current location (a clickable Google Maps link), today's delivery targets, and when they last checked in.
- Refreshes automatically every 30 seconds.

Equipment

Owner

GM

Keeps the bottling line — or any factory machinery — from being serviced late.

Tracking a machine

- Add its name, type, serial number, and a service interval in days.
- The system calculates the next-due date and shows a status: ● **Operational**, ● **Due for service**, or ● **overdue/out of service**.
- Click **Mark Serviced** once maintenance is done to reset the countdown.

Staff Management

Owner

GM

The only place new accounts get created — there's no public sign-up, by design.

Adding and managing staff

- Enter their name, email, phone, and pick a role (General Manager, Manager, Supervisor, Accountant, or Driver).
- A temporary password is generated automatically and **emailed to them**; it's also shown once on screen in case the email doesn't land.
- Change anyone's role at any time from the dropdown next to their name.
- **Deactivate** blocks a login instantly without deleting their history; **Activate** restores it.
- **Reset Password** generates and emails a fresh temporary password and forces them through the "set a new password" screen again on next login.

Attendance

Everyone

A simple clock-in / clock-out for tracking hours worked.

- Press **Clock In** at the start of your shift and **Clock Out** at the end — the system calculates hours worked for you.
- Your personal history sits in a table below: date, clock-in and clock-out times, hours, and status.

Activity Log

Owner — everyone's activity

GM — everyone's activity

Manager/Supervisor — own activity

A running audit trail of product sales activity — who sold what, and when.

- Owner/GM see a **Sold By** column identifying everyone's activity across the store.
- Managers and Supervisors see the same table scoped to just their own recorded sales ("My Activity Log" in the sidebar).

Account & Security

Everyone

Changing your password

- Open the user menu (top right) → **Change Password**.
- Enter your current password, then a new one at least 8 characters long, twice.

Signing out & sessions

- **Sign out** from the user menu ends your session on this device.
- Sessions renew quietly in the background while you're active; if a device is idle for a long stretch, you'll be returned to the login screen and simply need to sign in again.
- Five failed login attempts locks the account for 15 minutes — a normal security measure, not an error.

Glossary

Audit-locked price

A selling price that can't be casually edited from the main product form — changing it always goes through a separate, Owner/GM-only control, so every price change is deliberate and traceable.

Store switcher

The dropdown (Owner accounts only) for moving between Stacey Fountain and Stacey Farm without signing out.

SKU

The short product code shown in the catalog. It's generated automatically — nobody types or edits it.

Low Stock Threshold

The stock level below which a product is flagged as low and shows up in Dashboard alerts.

Token

Fountain-side loyalty credit customers build up with purchases, redeemable by a driver for free packs.

Supply Schedule

Farm-side recurring delivery plan per customer (daily/weekly/biweekly/monthly), tracked as Overdue, Due Today, or Upcoming.

Manual Past-Sale Entry

A way to log a sale that happened before Stacey POS was in use, so historical records aren't lost.

Approval threshold

The amount above which an expense needs Owner/GM sign-off instead of being approved automatically.

Stacey POS User Guide — covers Stacey Fountain and Stacey Farm operations as configured at handover. Currency is displayed in Nigerian Naira (₦) throughout.
